(54) PHOTSENSITIVE MATERIAL FOR FORMING PLANOGRAPHIC PRINTING PLATE AND FORMATION OF PLANOGRAPHIC PRINTING PLATE

(57)Abstract:

PURPOSE: To provide a photosensitive material for forming planographic printing plate suitable for scanning exposure by laser and excellent in preservable stability and a planographic printing plate using the same.

CONSTITUTION: The photographic sensitive material for forming planographic printing plate provided with a photosensitive layer, which contains a compound having at least one of an ethylenic unsaturated bond, a binder component and a photopolymerization initiator, and a protective layer in this order contains at least a salt of a cationic dye with a an organic boron compound anion and the other boron compound in the molar ratio of 1:2 to 1:5 as the photopolymerization initiator. And after the photosensitive layer of the photosensitive material for forming planographic printing paper is imagewise scanning-exposed by the laser, the protective layer and the unexposed part of the photosensitive layer are eluted to remove.
